Macroeconomic overview

During the first quarter of 2024 (Q1), the US economy turned out to be stronger than expected, leading to sharp upward revisions to growth forecasts in 2024¹ to 2.2% compared to 1.2% at the end of December. Strong household consumption and lower savings rates have supported demand, resilience of the labour market, and private sector confidence. In Europe, leading indicators (PMI surveys, consumer confidence) improved, supported by the services sector, which contrasts with the weakness of the industrial sector. Recession risks in the euro area therefore eased significantly in Q1, despite sluggish activity in Q4 2023. In Europe, economists expect activity to almost stagnate in 2024, both in the United Kingdom (0.3% compared to 0.1% in 2023) and in the euro area (0.5% compared to 0.4% in 2023). In emerging economies, India continues to surprise favourably, thanks to the deployment of its infrastructure, and the vibrancy of consumption and exports. In China, the lack of recovery in the real estate sector has led the authorities to strengthen support measures (reduction of banks' reserve requirements, reduction of mortgage rates, establishment of a stabilisation fund). Trade tensions between China and the United States have not prevented a recovery in leading indicators (PMI surveys improved this quarter). The slowdown in the Chinese economy is expected to continue, smoothly, with GDP growth expected to be 4.6% in 2024 and 4.4% in 2025 (compared to 5.2% in 2023). In an economic environment relatively less marked by the risk of recession, inflation evolved in a contrasting manner, with upside surprises in the United States (3.5% in March versus 3.4% expected, and 3.4% in December), and downside surprises in the euro zone (2.4% in March versus 2.5% expected, and 2.9% in December). However, in the United States as in the euro zone, the area of resistance continues to be inflation excluding energy and food (in March, at 3.8% and 2.9% respectively). This persistence is the result of the vitality of the services sector, and wage growth in a context of relatively weak productivity improvement, probably due to several factors: employee retention, less hours worked, higher absenteeism, or a relative increase in the generally less skilled workforce. The evolution of productivity and unit labour costs, due to their large impact on company margins, directly influences prices. These indicators are therefore closely watched to guide monetary policy and anticipate changes in key rates and financial conditions.

In the second quarter of 2024 (Q2), the global economy continued to recover, marked by higher-than-expected inflation and the risks of monetary policy divergence. Inflation in the United States was a surprise to the upside again in March at 3.5%, before falling in April (3.4%) and May (3.3%). Inflation in the euro area proved to be more persistent than expected, with a change between 2.4% and 2.6% this quarter, in a context of economic recovery. Q1 GDP growth was a favourable surprise in Europe and the United States, with a continued increase in household consumption. Purchasing managers' surveys (PMIs) from March to May signalled that growth in private activity would continue in Europe, thanks to the momentum in services and despite difficulties in the industrial sector. Inflationary risks appeared higher in the United States than in Europe, as U.S. demand remains buoyant and above potential, which is not the case in Europe where supply constraints dominate. The US Federal Reserve has also issued renewed signals of vigilance regarding the start of its monetary easing cycle, which has not failed to influence the central banks of emerging countries that are subject to risks on their currencies. Inflation in emerging markets is higher than in developed countries, and inflationary risks are exacerbated in the context of geopolitical uncertainty, volatility in oil and gas prices, and a sharp rise in wheat and copper prices.

¹ Bloomberg consensus as at 31/03/2024.

HSBC SELECT FLEXIBLE FCP

Finally, the increase in central bank interest rate differential expectations partly weighed on emerging currencies, which maintained high inflation via the prices of imported goods. In China, economic reports were mixed, with weak domestic demand and sluggish inflation (0.2% in June). However, the Chinese authorities have continued to support the real estate sector, including through macroprudential measures and the conversion of unsold homes into social housing. The momentum of Chinese exports was maintained in Q2, despite trade tensions with the United States and the risks of escalation, with the imposition of new tariffs, particularly on electric vehicles, solar panels and lithium-ion batteries.

In the third quarter (Q3) of 2024, geopolitical risks, uncertainties related to the US elections and fiscal policy choices in both Europe and the United States left economists waiting for a soft landing or a recession. The continued moderation of inflation in the United States (2.5% in August after 3.3% in May), in the euro area (1.8% in September compared to 2.6% in May) and in a majority of emerging countries has led to further rate cuts by central banks, in the context of a certain resilience of the economy. Indeed, the acceleration of US GDP in Q2 was a surprise to the upside (3.0% annualised quarterly change compared to 2.0% expected and 1.4% in Q1), in particular household consumption. In addition, the historical US GDP numbers have been revised positively, in particular the savings rate and household income, which have benefited from interest income on investments and deposits during the period of a rise in interest rates. In the United States, employment reports (in particular the rise in the unemployment rate to 4.3% in July versus 4.1% expected, after a low of 3.4% in April 2023) as well as the deterioration in confidence surveys (particularly in the manufacturing sector) have established that the risk of recession is higher than the risk associated with persistent inflation. In the euro area, GDP growth was certainly in line with expectations (0.2% Q/Q in Q2), but this is thanks to the positive contribution of foreign trade and lower imports due to the contraction in domestic demand. Divergence within the region widened, with a deterioration in activity in Germany, some resilience in Italy and France, and strong expansion in Spain. Elsewhere in Europe, the economic recovery in the UK continued in Q2, albeit at a more moderate pace, driven by public spending and private investment. With the new tax rules of the European Union and the new government of the United Kingdom, tax policy choices will impact economic activity, with uncertain multiplier effects over the next few years. In China, after lower-than-expected growth (0.7% Q/Q in Q2 versus 0.9% expected and 1.6% in Q1), the authorities stepped up their support for the real estate and financial sectors at the end of September, and signalled further measures to support domestic demand.

In the fourth quarter of 2024 (Q4), GDP growth in developed countries in Q3 was stronger than expected overall, thanks to household consumption, particularly in the United States, the euro zone and Japan. Disinflation has led to an improvement in purchasing power against a backdrop of labour market resilience and easing of financial conditions. However, during Q4, confidence indicators signalled a moderation in activity, driven by the continued decline in the manufacturing sector, despite some resilience in services. The trade and tax policies proposed by the new US administration from 2025 onwards have exacerbated concerns in the business community. In Europe, the need to return to balanced budgets and the likelihood of higher taxes have led to a further decline in household confidence, which risks weakening consumption, the main pillar of economic activity. Also the GDP growth forecasts in 2025² were revised downwards in the euro zone from +1.3% in September³ to +1.0% in December², due to Germany (GDP revised to +0.4%² compared to +1.0% in September), and France (GDP revised to +0.7%² compared to +1.1% in September³).

² Bloomberg consensus as at 31/12/2024.

³ Bloomberg consensus as at 30/09/2024.

HSBC SELECT FLEXIBLE FCP

In the rest of Europe, the GDP growth forecasts in 2025 have shown some resilience, but only Spain is expected to continue relatively strong growth at +2.2%, driven by favourable comparative advantages, particularly in terms of labour costs, energy prices, and exposure to the tourism sector. Statistics in the United States confirmed American exceptionalism with solid growth in November, on the wage (+4.0% Y/Y) and household spending (5.5% Y/Y) fronts, which tends to support inflation (2.7% Y/Y in November compared to 2.4% in September). Thus, US growth forecasts for 2025 have continued to be revised upwards, from +1.8% in September to +2.1% in December². American exceptionalism contrasts with economies that are slightly losing momentum against a backdrop of trade tensions and the risk of tariff barriers. This environment is not expected to lead to inflationary pressures or risks of price-wage loops in 2025: inflation² is expected to slow to 2.0% in the euro area, to 2.1% in the United States, and to stabilise at most at 2.5% in the United Kingdom, which would allow for additional monetary easing, albeit of varying magnitudes depending on the national context. Only monetary policies in Brazil and Japan will continue to stand out, with more rate hikes in 2025. In China, the authorities have signalled that they are staying the course of strengthening credit support, and have shown themselves willing to take exceptional measures. The moderation in economic activity is therefore expected to remain relatively well controlled thanks to the good performance of the industrial sector and the beginning of a recovery in household consumption, which suggests a moderate slowdown² in 2025 to 4.5% compared to 4.8% in 2024. In India, the consensus of economists is for GDP growth of 6.5%, slightly lower than the September forecast (6.9%) and compared to 8.2% in 2024. Finally, in Latin America, the trend for 2025 is also for slowing down, particularly in Mexico where the American free trade agreement will be called into question.

Financial overview

In the first quarter of 2024 (Q1), the strength of the US economy sustained the upward turnaround in equity markets that began in the previous quarter (MSCI* World Index +9.5% Q/Q in Q1 2024). The US stock market (MSCI* USA +10.4%) outperformed the global index, as well as the markets in Japan (+19.3%) and the euro zone (+10.3%). Risk appetite was fuelled by generally favourable corporate earnings and diminishing recession fears. This environment also favoured credit markets in the US and Europe, particularly the riskiest bond segments (High Yield HY) which outperformed the less risky segments (Investment Grade IG). Conversely, this context was not as beneficial to emerging markets (MSCI EM +4.6%), and penalised bond markets, which had priced in significant expectations of monetary easing. At the beginning of January, the markets were already anticipating significant rate cuts for the year 2024, particularly for the US Federal Reserve (Fed) and the European Central Bank (ECB) (around 150 basis points), but also for Latin American central banks. The stronger-than-expected momentum of the US economy and the persistence of inflation have led to a reversal of these expectations, which, at the end of March, only included cuts of 75 basis points (bps) for the Fed, and 100 bps for the ECB. As a result, sovereign yields rebounded sharply in Q1: +32bps to 4.20% in the US, +27bps to 2.30% in Germany, +39bps to 3.93% in the UK, with a similar move in emerging markets. The postponement of the Federal Reserve's rate cut cycle has allowed for a favourable yield differential for the US dollar (DXY index₁ +3% in Q1), notably at the expense of the Japanese yen (-6.8% against the US dollar in Q1) and the Swiss franc (-6.7%). The Swiss franc was penalised by the Swiss National Bank's (SNB) monetary outlook. Its president suggested in January that the SNB was less in favour of a strong Swiss franc. The SNB was the first central bank in developed economies to cut its key interest rate in March, from 1.75% to 1.50%. Finally, tensions in the Middle East continued to support oil barrel (WTI +16% to USD 83) and gold (+8% to USD 2,230 per ounce) prices.

HSBC SELECT FLEXIBLE FCP

The second quarter of 2024 (Q2) was mainly marked by uncertainties related to the US rate cut cycle, but also by political developments, particularly in France, which penalised the bond markets. As a result, 10-year sovereign bond yields continued to rise in Q2: +20bps to 4.40% in the US and 2.50% in Germany, or +24bps in the UK to 4.17%. This environment has supported the continued appreciation of the US dollar (DXY index)⁶ +1.3% in Q2), notably at the expense of the Japanese yen (-5.9% against the US dollar in Q2), the Mexican peso (-9.6%) and the Brazilian real (-10.9%). Political developments have exacerbated market developments, with a favourable reception following the elections in South Africa and India, unlike in Mexico. In France, the surprise dissolution of parliament following the results of the European Parliament elections, and the call for parliamentary elections on 30 June and 7 July, led to a strong movement of risk aversion. Bond and stock markets have taken stock of the risks of slippage in public finances, as well as uncertainties regarding compliance with European budgetary rules. As a result, the 10-year yield on French debt jumped by 49bps to 3.30%, which pushed up the yields on the debt of the riskiest European countries: +26bps to 3.42% on Spanish government bonds, and +39bps to 4.07% on their Italian equivalents. Financial securities, which are closely linked to sovereign risk, were also punished, as well as the high yield credit market and eurozone equities (MSCI eurozone -1.2% Q/Q). Political uncertainties penalised the equity markets in Brazil (-2.5% Q/Q) and especially in Mexico (-7.5% Q/Q). Conversely, stock market indices continued to rise in the United States (+4.0% Q/Q), the United Kingdom (+3.6%), and India (+10% Q/Q), and recovered in China (+7% Q/q) and South Africa (+8.5%).

In the third quarter (Q3) of 2024, financial markets were particularly turbulent, amid concerns about global growth and central bank decisions. Volatility indices jumped, with market reversals, particularly in early August on two triggers: a larger-than-expected deterioration in US employment, and an unexpected rate hike by the Bank of Japan. These announcements came in markets that were illiquid due to the summer holidays, and led to the abrupt unwinding of speculative positions. However, the sharp fall in global stock markets lasted only a few days, in the wake of increased expectations of central bank rate cuts. Against a backdrop of disappointing employment data, a fall in the price of oil (WTI -16% Q/Q to USD 68/barrel) and disinflation, the Fed began its monetary easing cycle in September, with a sharper-than-expected reduction in its key rates, by -50 basis points (bps) versus -25bps expected. The Fed's rate cut has paved the way for a series of decisions by central banks in emerging and developed countries, but also encouraged expectations of larger rate cuts. In China, the authorities rolled out a major support plan at the end of September, through cuts in bank rates and reserve requirements as well as measures for the real estate and financial sectors (including a fund for share buybacks). These measures had a strong impact on stock market indices, and the MSCI* World Index ended on Q3 up 5% Q/Q (quarterly variation). Developed market equities slightly underperformed (MSCI DM +4.8% Q/Q) versus emerging country markets (MSCI EM +6.8% Q/Q), supported by the Chinese index which jumped 24% Q/Q. On the bond markets, expectations of increased monetary easing favoured the riskiest securities, such as high-yield credit, or such as sovereign securities in emerging countries (notably Mexico and South Africa) and those in the periphery of the euro zone (Greece, Portugal, Italy, Spain). In the foreign exchange market, the Fed's decision weighed on the US dollar (DXY)¹ -4.8% Q/Q in Q3). In contrast to the Fed, the rate hike by the central bank of Japan propelled the yen versus the US dollar (+12% Q/Q). Finally, on the commodity markets, the surge in gold (+13% Q/Q to USD 2,634 per ounce) continued; the volatility of the oil price (WTI -16% Q/Q to USD 68/barrel) was linked to the prospect of moderating global demand, geopolitical tensions in the Middle East and the uncertain outcome of the OPEC+ cartel's supply conditions ahead of their next meeting in December.

HSBC SELECT FLEXIBLE FCP

In the fourth quarter (Q4) of 2024, markets priced in risks related to trade and budget policy changes after the 8 November U.S. election. Donald Trump's new administration is considering fiscal stimulus, tariff barriers, immigration restrictions, cuts in federal spending and a resumption of oil and gas development, among other things. Despite the lack of visibility in terms of scale and timing, the markets have anticipated the likely impacts of such measures: a sustained growth and inflation dynamic in the United States, with the consequence of less monetary easing by the Federal Reserve. Indeed, the markets have priced in that the Fed Funds rate will fall less than expected before the elections: they have established 3.75%-4.0% by December 2025 (compared to 3.25%-3.50% before the elections). The variation in monetary policy expectations has therefore favoured the US dollar (DXY index¹ 7.6% Q/Q; +7.1% Y/Y). This US exceptionalism was reflected in the outperformance of US equities (MSCI* US index +2.8% quarterly Q/Q; +25.1% Y/Y), to the marked disadvantage of emerging country markets (MSCI EM index -4.2% Q/Q; +13.7% Y/Y), particularly in Brazil (MSCI index -10.0% Q/Q; -11.4% Y/Y), Mexico (MSCI -5.0% Q/Q; -10.2% Y/Y) or India (MSCI -8.7% Q/Q; +15.7% Y/Y). European equities ended the year with a mediocre (EuroStoxx600 index -2.9% Q/Q; +6.0% Y/Y) and contrasted performance, with good growth in Germany (MSCI index +1.6% Q/Q; +14.9% Y/Y), in contrast to the United Kingdom (-0.2% Q/Q; +9.5% Y/Y), and especially in France (-3.4% Q/Q; -1.2% Y/Y), penalised by budgetary and fiscal uncertainties. On the bond markets, the challenges of monetary policy and fiscal consolidation have accentuated the steepening of yield curves as well as the differences in sovereign interest rate movements. In Q4, 10-year sovereign bond yields rose sharply in the United States (+79bps to 4.57%) and the United Kingdom +57bps to 4.57%, but to a lesser extent in Germany (+24bps to 2.37%), France (+28bps to 3.20%), and especially in Italy (+7bps to 3.52%). In credit markets, the riskiest bond segments (High Yield (HY)) outperformed the less risky segments (Investment Grade (IG)). On the oil markets, many factors have contributed to price volatility: the expected slowdown in global demand in 2025, geopolitical uncertainties in the Middle East, the appreciation of the US dollar, the prospect of a possible resumption of development in the United States, the world's largest producer. Thus, despite an improvement in Q4 (Brent +4.0% Q/Q), the year 2024 ended with a decline in the price of a barrel (Brent) of -3.1% Y/Y to USD 74.6/barrel.

* MSCI equity market indexes expressed in local currencies.

¹ DXY Index: an index of the US dollar against six other currencies: the euro, the Japanese yen, the British pound, the Canadian dollar, the Swiss franc and the Swedish krona.

Source: Bloomberg data as at 31/12/2024.

Investment policy

Equity market allocation:

Equity market allocation was 45% on average, in line with its investment universe. The level of investment was 39% at the beginning of the year before the resilience of the economy, particularly in the US, prompted us to raise the exposure beyond 45% from March. Overall, the allocation to equities contributed negatively during the year.

Equity market exposure:

The geographical allocation favoured US equities profitably throughout the year. Their share in equity investments was 43% on average. Europe was the second largest investment area (36% on average), the share of which was reduced throughout the year until December, when we resumed positions. The country choices have contributed positively, in particular through our preference for Italy and Spain instead of France.

HSBC SELECT FLEXIBLE FCP

We started the year with 6% emerging market equities and gradually increased their percentage to take into account the improvement in financial conditions and Chinese support measures. The average exposure to emerging markets was 11%. We tactically managed exposure to the Japanese market with beneficial underexposure during the summer. Finally, about 7% of the portfolio is invested in thematic funds to participate in long-term innovation cycles. Sector allocations contributed positively to performance in 2024.

Investments in the European and American markets are diversified based on performance factors. The positioning favouring value and growth stocks in Europe, with a larger share of low-volatility stocks over the summer, was favourable. On the other hand, diversification away from growth stocks in the United States was a loss of revenue in a context of AI hegemony. The same was true for investments in thematic funds. Within emerging markets, we benefited from our preference for Asian markets (China, India, Taiwan) but our investments in Turkey and Indonesia were unfavourable.

Bond market allocation:

We maintained a moderate sensitivity to bonds at the beginning of the year in anticipation of the normalisation of consumer price developments and the pivot of central banks to resume exposure in May, which allowed us to benefit from the bond expansion. We reduced the sensitivity in December. During the year, the average sensitivity of the portfolio was 2.8 years. Bond allocation management contributed positively to performance.

Bond market exposure:

In view of the reduction in short-term rates initiated by central banks' monetary policies, we have favoured a positioning on the short end of the curve, particularly on 2-year public debt, which has been profitable. Within private debt, we have maintained a large position with a preference for European investment-grade credit. Investments in financial subordinated debt and high-yield credit were the most profitable. Emerging debt contributed positively in a context of lower financial conditions, through our support on emerging debt issued in dollars, but also on our specific positions on debt issued in Chinese RMB and the Indian Rupee, which are favourable for our portfolios, denominated in euros.

Diversification assets:

The portfolios partially hold a diversification of assets that are uncorrelated with traditional asset classes. Commodity performance (around 2% of the portfolio) and trend-following and arbitrage strategies were all positive over the year.

Finally, our currency allocation was unfavourable, in particular the management of the dollar and our positions in the Swedish and Norwegian krona.

Performance

At the end of the fiscal year, the Fund posted a performance of 7.90% for A units, 8.55% for B units and 8.56% for H units. The R unit is inactive.

Past performance is not an indicator of the Fund's future performance.

HSBC SELECT FLEXIBLE FCP

Information on Environmental, Social, and Governance (ESG) criteria

In accordance with Article L.533-22-1 of the French Monetary and Financial Code, the policy on considering environmental, social, and governance quality (ESG) criteria in the investment strategy is available on the management company's website at www.assetmanagement.hsbc.fr.

Non-consideration of criteria for environmentally sustainable economic activities under Regulation (EU) 2020/852

The Fund does not promote environmental or social characteristics within the meaning of Article 8 of Regulation (EU) 2019/2088 of 27 November 2019 on sustainability-related disclosures in the financial services sector («SFDR») or does not have a sustainable investment objective within the meaning of Article 9 of this EU regulation.

In this context, the underlying investments of the Fund do not take into account the European Union criteria for environmentally sustainable economic activities within the meaning of Regulation (EU) 2020/852 of 18 June 2020 on the establishment of a framework to promote sustainable investment and amending Regulation (EU) 2019/2088 («Taxonomy Regulation»).

Events affecting the Fund during the current or upcoming fiscal year

✓ 28 June 2024

Information on the HSBC Group's responsible investment policies (coal policy and energy policy) has been specified in the prospectus.

Finally, recurring costs and performance scenarios have been updated in the Key Information Documents (KID).

✓ 1^{er} January 2025

Updating of the prospectus with the updated wording of the following paragraphs:

- ✓ Restrictions on the issuance and redemption of units/shares for US Persons
- ✓ Restrictions on the issuance and redemption of units/shares for Canadian residents
- ✓ Provisional measures prohibiting subscriptions in the UCI as of 12 April 2022

Information on remuneration aspects

In accordance with the applicable regulations, HSBC Global Asset Management (France) has chosen to disclose the information relating to the remuneration of its personnel for all the AIFs and UCITS under French law that it manages.

The remuneration paid by HSBC Global Asset Management (France) consists of fixed remuneration and may, if economic conditions permit, include a variable component in the form of a discretionary bonus. The variable remuneration is not linked to the performance of the vehicles managed, nor is there any incentivisation on the basis of capital gains.

HSBC SELECT FLEXIBLE FCP

HSBC Global Asset Management (France) applies the HSBC Group's remuneration policy.

This Group policy incorporates a large number of the principles set out in the AIFM regulations as well as the UCITS regulations.

From 2014 onwards, HSBC Global Asset Management (France) has made adjustments to this remuneration policy in order to comply with specific rules in the AIFM regulation and then the UCITS regulation concerning the management of funds compliant with these respective regulations.

In particular, HSBC Global Asset Management (France) has introduced a mechanism for indexation of financial instruments on the basis of an index indexed to a representative basket of all UCIs for which HSBC Global Asset Management (France) is the management company with the exception of employee shareholding mutual funds (FCPE) for all employees who are entitled to deferred remuneration under the AIFM regulation and the UCITS regulations.

The remuneration policy of HSBC Global Asset Management (France) has no impact on the risk profile of AIFs and UCITS.

The full HSBC Global Asset Management (France) remuneration policy is available on its website at www.assetmanagement.hsbc.fr.

Breakdown of the company's fixed and variable remuneration for fiscal year 2024

Information on the total remuneration paid by the management company to its staff and the aggregate amount between senior managers and staff members that have an impact on the risk profile is provided in the table below.

The beneficiaries of remuneration for fiscal year 2024 amount to 303 people.

In 2024, and as defined in the remuneration policy of HSBC Global Asset Management (France), 42 people were identified as «Risk Takers» for all portfolios managed.

HSBC SELECT FLEXIBLE FCP

The employees identified as Risk Takers are:

- Members of the Board of Directors,
- Responsible officers and members of the Executive Committee,
- Heads of Investment and Trading,
- Sales, product and marketing managers,
- Heads of control functions (risk, compliance and internal control),
- Legal and finance managers and heads of support and administrative functions.

	2024				
	Fixed remuneration paid in 2024	Variable remuneration paid in March 2024 (for 2023 performance) + Deferred variable remuneration vested in 2024	of which non-deferred variable remuneration	of which deferred variable remuneration (*)	Total €
All AMFR staff including seconded in and branches (excl. seconded out) – 303 persons	€29,260,925	€12,520,610	€11,244,402	€1,276,208	€41,781,535
Of which staff having an impact on the AIF risk profile (42 persons)**	€7,389,432	€5,613,080	€4,401,262	€1,211,818	€13,002,512
Of which senior management (14 persons)**	€2,420,314	€1,584,813	€1,322,258	€320,690	€4,005,127

(*) Includes deferred shares fully vested in 2024 and the indexed deferred cash amount paid in 2024. (**) Takes into account seconded or assigned people prorated based on the proportion of time they are at the company.

Variable remuneration does not include any payments received by employees under profit-sharing agreements or incentive schemes in 2024.

Information relating to efficient portfolio management techniques and derivatives used by the Fund, pursuant to AMF position No. 2013-06

Efficient portfolio management techniques

As of the close of the fiscal year, the Fund did not use efficient portfolio management techniques.

Derivatives

At of the close of the fiscal year, the derivatives used by the Fund made up 0.06% of net assets.

Financial contracts generated exposure of:

- 0.06% for forward foreign exchange contracts

HSBC SELECT FLEXIBLE FCP

The counterparties used were:

BARCLAYS BANK IRELAND PLC BOFA
SECURITIES EUROPE S.A. HSBC
CONTINENTAL EUROPE CITIBANK

ROYAL BANK OF CANADA SOCIETE
GENERALE
UBS EUROPE SE
HSBC CONTINENTAL EUROPE
BOURSORAMA

The Fund received a security deposit of €2,376,128.11 in connection with these operations.

Aggregate exposure

The management company used the absolute VaR calculation method to measure the overall risk of the Fund it manages.

VaR is calculated according to a parametric methodology. A short-term risk model is used to represent the dynamics of market risk parameters (volatility and correlations). This model is based on data history sets covering at least 250 days.

VaR is calculated for a one-sided confidence interval of 99% and a holding period of one day (99% 1-day VaR). The 99% 1-day VaR is converted to a VaR with a 99% confidence interval and 20-day holding period (99% 20-day VaR) according to the method recommended by the regulator.

Over the year, VaR (99% 1 month) represented:

- on average: 4.31%
- at least: 3.83%
- At most: 4.93%

In addition to monitoring VaR, the Fund's leverage is also calculated.

For information purposes, leverage, calculated as the sum of the nominal positions on the financial contracts used, represented (over the year):

- on average: 80.53%
- at least: 43.31%
- At most: 213.21%

Transparency of securities financing transactions and the reuse of financial instruments – SFTR – in the accounting currency of the UCI (EUR)

The UCI did not carry out any transactions covered by the SFTR during the fiscal year.

Regulatory information

Risk monitoring report

General observation:

Over the period under review, the risk assessment and monitoring procedures established to manage the fund did not identify any (significant) anomaly regarding its exposure to market risk, credit risk, counterparty risk, or liquidity risk.

In addition, no material misstatements in terms of valuation risks were identified over that period.

	Significant anomalies identified relating to the closure of the Fund	Observations
1	Market Risk	None
2	Credit Risk	None
3	Counterparty Risk	None
4	Liquidity Risk	None
5	Valuation Risk	None

Financial intermediary selection and assessment procedure

The management company selects brokers or counterparties according to a procedure that complies with the regulations applicable to it. As part of this selection, the management company fulfils its «best execution» obligation at all times.

The objective selection criteria used by the management company specifically include the quality of order executions, the rates applied, and the financial soundness of each broker or counterparty.

The counterparties, investment companies, and service providers of HSBC Global Asset Management (France) are selected according to a specific evaluation process intended to ensure that quality service is provided to the company. This is a key element in the general decision-making process that incorporates the impact of the service quality of the broker across all our departments: Management, Financial and Credit Analysis, Trading and Middle Office, and Legal.

Counterparty selection can involve an entity linked to the HSBC Group or the Fund's depositary.

The “Best Execution and Best Selection Policy” is detailed on the management company's website at www.assetmanagement.hsbc.fr.

HSBC SELECT FLEXIBLE FCP

Report on brokerage fees

In accordance with Article 321-122 of the General Regulations of the AMF, and if the terms of this article are met, the report on brokerage fees for the previous fiscal year is available on the management company's website: www.assetmanagement.hsbc.fr.

Exercise of voting rights

The management company's voting policy, as well as the report on the conditions in which the voting rights were exercised, may be consulted on the management company's website: www.assetmanagement.hsbc.fr.

Use of financial instruments managed by the management company or a related company

The table of financial instruments managed by the management company or a related company can be found in the notes to the Fund's annual financial statements.

Conflict of interest policy

Because of its global reach and the wide range of financial services offered, the HSBC Group, or its affiliated companies (referred to below as HSBC), could have interests that differ from time to time from those of its clients or that conflict with its duties toward its clients. There may be conflicts between the interests of HSBC, its affiliated companies, or its employees, on the one hand, and the interests of its clients, on the other hand, or even conflicts between the clients themselves.

HSBC has defined procedures to identify and manage such conflicts, notably organisational and administrative arrangements intended to protect clients' interests. This policy is based on a simple principle: persons taking part in various activities posing a conflict of interest are required to execute these activities independently of each other.

Where applicable, HSBC implements measures to restrict the transmission of information to certain employees in order to protect clients' interests and to prevent any undue access to information concerning clients.

HSBC may also act on its own account and have a client as counterparty or even "match" the orders of its clients.

Procedures are in place to protect clients' interests in this scenario.

In some cases, HSBC's procedures and controls may not be sufficient to ensure that a potential conflict will not damage a client's interests. In these circumstances, HSBC informs the client of the potential conflict of interest in order to obtain the client's express consent to continue the activity. In any event, HSBC may refuse to intervene in circumstances where there would ultimately be a residual risk of harming a client's interests.

HSBC SELECT FLEXIBLE FCP

Statutory auditor's certification on the annual financial statements

HSBC SELECT FLEXIBLE FCP

HSBC Select Flexible

Fiscal year ended 31 December 2024

Statutory auditor's report on the annual financial statements

To unitholders of the HSBC Select Flexible fund,

Opinion

In compliance with the assignment entrusted to us by the management company, we have audited the annual financial statements of the HSBC Select Flexible undertaking for collective investment established in the form of a mutual fund (FCP) for the period ended 31 December 2024, as included in the present report.

We certify that the annual financial statements are, with respect to French accounting rules and principles, legal and truthful and provide an accurate picture of the results of the operations of the past fiscal year and of the financial situation and assets of the fund at the end of the fiscal year.

Basis of our audit opinion

Audit reference standard

We conducted our audit in accordance with professional standards applicable in France. We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our audit opinion.

Our responsibilities according to these standards are described in the "Statutory auditor's responsibilities for the audit of the annual financial statements" section of this report.

Independence

We conducted our audit in accordance with the rules of independence provided for in the French Commercial Code and in the professional code of ethics for statutory auditors for the period from 30 December 2023 to the issue date of our report.

Observations

Without calling into question the opinion expressed above, we draw your attention to the consequences of the change in accounting methods set out in the notes to the annual financial statements.

HSBC SELECT FLEXIBLE FCP

Justification of Assessments – Key Audit Matters

Pursuant to the provisions of Articles L. 82-1-53 and R. 82-1-180 of the French Commercial Code concerning the basis for our assessments, we inform you that, in our professional judgement, the most significant assessments that we conducted pertained to the appropriateness of the accounting principles applied, in particular as regards the financial instruments and the overall presentation of the financial statements, in view of the accounting system applicable to open-ended undertakings for collective investments.

These matters were addressed in the context of our audit of the financial statements as a whole and in forming our opinion thereon expressed above. We do not provide a separate opinion on these matters.

Specific verifications

We also performed the specific verifications required by the applicable laws and regulations in accordance with the professional standards required by the applicable laws and regulations.

We have no comments to make as to the fairness and consistency of the information given in the management report prepared by the management company with the annual financial statements.

In accordance with the law, we would like to inform you that our report on the annual financial statements could not be made available to you within the time limit prescribed by Article 411-37 of the Rules of Procedure of the AMF, as the information and elements necessary for establishing such report were not communicated to us within the time limit provided in this article.

Management company's responsibilities for the annual financial statements

The management company is responsible for the preparation and fair presentation of the financial statements in accordance with French accounting principles and for such internal control as it determines is necessary to enable the preparation of financial statements that are free from material misstatement, whether due to fraud or error.

In preparing the financial statements, the management company is responsible for assessing the fund's ability to continue as a going concern, disclosing, as applicable, matters related to going concern and using the going concern basis of accounting unless it is expected to liquidate the fund or to cease operations.

The annual financial statements were prepared by the management company.

Statutory auditor's responsibilities for the audit of the annual financial statements

It is our responsibility to prepare a report on the annual financial statements. Our goal is to obtain reasonable assurance that the annual financial statements taken as a whole do not contain any material misstatements. Reasonable assurance is a high level of assurance but is not absolute assurance and therefore is not a guarantee that an audit conducted in accordance with the professional standards will always detect a material misstatement when it exists. Misstatements may arise as a result of fraud or error and must be regarded as being material if it can reasonably be expected that they, individually or in the aggregate, will affect the financial decisions made by users of the financial statements on the basis of the financial statements.

As specified in Article L. 82 1-5 5 of the French Commercial Code, our audit does not include assurance on the viability or the quality of management of your fund.

HSBC SELECT FLEXIBLE FCP

As part of an audit conducted in accordance with professional standards applicable in France, we exercise professional judgement throughout the audit.

In addition:

- ▶ Identify and assess the risks of material misstatement of the financial statements, whether due to fraud or error, design and perform audit procedures responsive to those risks, and obtain audit evidence that is sufficient and appropriate to provide a basis for our opinion. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control;
- ▶ the auditor obtains an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the entity's internal control;
- ▶ the auditor evaluates the appropriateness of accounting policies used and the reasonableness of significant accounting estimates made by the management company, as well as the overall presentation of the financial statements;
- ▶ the auditor concludes on the appropriateness of the management company's use of the going concern basis of accounting and, based on the audit evidence obtained, whether a material uncertainty exists related to events or conditions that may cast significant doubt on the fund's ability to continue as a going concern. Our conclusions are based on the audit evidence obtained up to the date of our auditor's report. However, future events or conditions may cause the Company to cease to continue as a going concern. If we conclude that a material uncertainty exists, we are required to draw attention in the audit report to the related disclosures in the financial statements or, if such disclosures are not provided or are inadequate, to issue a qualified opinion or a disclaimer of opinion;
- ▶ Evaluate the overall presentation of the financial statements and assess whether these statements represent the underlying transactions and events in a manner that achieves fair presentation.

HSBC SELECT FLEXIBLE FCP

Appendices

HSBC SELECT FLEXIBLE FCP

A. General Information

A1. Characteristics and activity of the open-ended UCI.

A1a Strategy and management profile

The fund aims to offer flexible investment in the equity and fixed income markets over a minimum investment horizon of 5 years. For indicative purposes, 20-80% of the fund's net assets are exposed to equity markets and 0-80% to fixed-income markets. The fund is exposed to developed markets with a euro bias and to emerging markets.

The prospectus/rules of the UCI describe these characteristics in a complete and precise manner.

HSBC SELECT FLEXIBLE FCP

A2. Accounting policies

The annual financial statements are being presented for the first time in the format specified by ANC regulation 2020-07 as amended by ANC regulation 2022-03.

1 Changes in accounting policies, including presentations, in connection with the application of the new accounting regulation on the annual financial statements of undertakings for collective investment with variable capital (ANC Regulation 2020-07 as amended).

This new regulation imposes changes in accounting methods, including changes in the presentation of the annual financial statements. Comparability with the financial statements of the previous year cannot therefore be achieved.

NB: the statements concerned are (in addition to the balance sheet and the income statement): B1. Changes in equity and financing liabilities; D5a. Allocation of distributable amounts related to net income D5b. Allocation of distributable amounts related to net realised capital gains and losses.

Thus, in accordance with the 2nd paragraph of Article 3 of ANC Regulation 2020-07, the financial statements do not present the data of the previous fiscal year; the N-1 financial statements are included in the notes.

These changes focus on:

- the structure of the balance sheet, which is now presented by types of eligible assets and liabilities, including loans and borrowings;
- the structure of the income statement, which has been profoundly modified; the income statement including, in particular: exchange differences on financial accounts, unrealised capital gains or losses, realised capital gains and losses and transaction costs;
- removal of the off-balance sheet table (part of the information on the items in this table is now included in the notes);
- removal of the option to account for included costs in the cost price (with no retroactive effect for funds formerly applying the included costs method);
- distinction between convertible bonds and other bonds, as well as their respective accounting records;
- a new classification of the target funds held in the portfolio according to the model: UCITS / AIFs / Other;
- accounting for forward exchange commitments, which is no longer done at the balance sheet level but at the off-balance sheet level, with disclosure about forward exchanges related to a specific unit;
- addition of information relating to direct and indirect exposures to the different markets;
- presentation of the inventory, which now distinguishes between eligible assets and liabilities and forward financial instruments;
- adoption of a single presentation template for all types of UCIs;
- removal of the aggregation of accounts for funds with compartments.

HSBC SELECT FLEXIBLE FCP

2 Accounting policies and methods applied during the year

General accounting principles apply (subject to the changes described above):

- true and fair view, comparability, going concern;
- accuracy, reliability;
- prudence;
- consistency of accounting methods from one period to the next.

The interest cash basis is used to recognise revenue from fixed-income securities.

Securities bought and sold are recognised excluding costs.

The euro is the reference currency for the portfolio's accounting.

The duration of the reporting period is 12 months.

Asset valuation rules

The asset valuation rules applied by the accounting manager are outlined below according to the instruments held by the UCITS:

The UCITS has adopted the euro as the reference currency.

The prices used for the valuation of securities traded on the stock exchange are the closing prices.

The prices applied for the valuation of OATs are the closing prices. The UCIs are valued at the last known price.

Marketable debt securities are valued at the market price. Repos are

valued at the contract price.

Futures, options, or exchange transactions made on OTC markets, authorised by applicable UCI regulations, are measured at their market value or at an estimated value according to methods chosen by the management company. Interest rate and/or currency swaps are valued at their market value based on the price calculated by discounting future cash flows (principal and interest), at the market interest and/or exchange rates.

European and foreign futures are valued on the basis of the clearing prices.

Interest-rate and foreign currency swaps are valued under market conditions. For swap contracts, the off-balance sheet commitment corresponds to the nominal amount of the contract.

The valuation of interest-rate swaps against share performance is carried out:

- under market conditions for the fixed income branch
- according to the underlying security rate for the equity branch.

The valuation of Credit Default Swaps (CDS) stems from a model fed by the market spreads.

HSBC SELECT FLEXIBLE FCP

Off-balance-sheet commitments in the European and foreign futures markets are calculated as follows:

- FUTURES TRANSACTION

(Qty x Nominal x Daily rate x Contract currency)

- FUTURES OPTION

(Qty x delta) x (Nominal of the underlying instrument x Daily rate of the underlying instrument x Contract currency).

For swaps, the off-balance-sheet commitment corresponds to the nominal value of the contract plus or minus the interest differential and the unrealised capital gain or loss on the closing date.

Interest is accounted for on a coupon earned basis.

Portfolio entries are accounted for at their purchase price, excluding costs. FUTURES

Outright futures contracts on derivative markets are valued on the basis of the clearing price on the day of the valuation.

OPTIONS

Options on the derivatives markets are valued on the basis of the clearing price on the day of the valuation.

Forward exchange rate

Contracts are valued at the currency rate on the valuation date, taking into account the discount/premium amortisation.

Transaction fees are recognised in specific accounts of the Fund and are not added to the price. Securities bought and sold are recognised excluding costs.

Financial instruments whose prices were not determined on the day of valuation or whose prices have been adjusted are valued at their probable trading price under the responsibility of the management company. These valuations and proof therein are provided to the Statutory Auditor in connection with its audits.

Valuation of financial guarantees

Collateral is marked to market on a daily basis.

Haircuts can be applied to collateral received in the form of securities according to the level of risk. Margin calls occur daily unless otherwise indicated in the framework agreement covering these transactions or in case of agreement between the management company and the counterparty on the application of a trigger threshold.

Management fees

Financial management fees and administrative costs external to the management company include all fees charged directly to the UCITS, with the exception of transaction fees.

Transaction fees include intermediation fees (brokerage, stock exchange taxes, etc.) and transaction fees, if applicable, which may be collected in particular by the custodian and the management company.

HSBC SELECT FLEXIBLE FCP

In addition to these financial management costs and administrative costs external to the management company, the following may be added:

- performance fees. These remunerate the management company as soon as the UCITS has exceeded its objectives. They are invoiced to the UCITS;
- transaction commissions charged to the UCITS;
- a share of income from the temporary purchase and sale of securities.

Fees charged to the UCITS		Base		Fee scale		
1	Financial management fees (*)	Net assets	Unit A: 1.20% maximum (VAT included)	Units H and B: 0.60% maximum (VAT included)	Unit R: 0.30% maximum (VAT included)	
2	Operating and other service fees (**)		0.30% maximum (VAT included)			
3	Max. indirect fees (commissions and management fees)	Net assets	1% maximum (VAT included)			
4	Transaction fees	Fee paid on each transaction	None			
5	Performance fees	Net assets	None			

* A percentage of the management fees may be repaid to third-party distributors in order to remunerate the act of marketing the UCITS.

** Operating and other service fees:

I. Fund registration and listing fees:

- the costs associated with the registration of the UCI in other Member States (including fees charged by advisors (lawyers, consultants, etc.) for carrying out marketing formalities with the local regulator instead of the SGP);
- the fees for listing UCIs and publishing net asset values for investor information;
- the costs of distribution platforms (excluding retrocessions); agents in foreign countries who interface with distribution

II. Customer and distributor information costs

- the costs of preparing and distributing DICs/prospectuses and regulatory reports;
- costs related to the communication of regulatory information to distributors;
- the costs of information to unitholders by any means;
- information specific to direct and indirect unitholders; 1: Letters to the unitholders, etc.;
- website administration costs;
- UCI-specific translation costs.

III. Data costs

- the cost of data used for redistribution to third parties;

HSBC SELECT FLEXIBLE FCP

IV. Custodian, legal, audit, tax fees, etc.

- the costs of statutory auditing;
- custodian-related fees;
- the costs related to the delegation of administrative and accounting management;
- tax costs, including lawyers and external experts (recovery of withholding taxes on behalf of the fund, local tax agent, etc.);
- the UCI's own legal fees;

V. Costs related to compliance with regulatory obligations and regulatory reporting

- the costs of implementing regulatory reporting for the regulator specific to the UCI;
- Compulsory professional association dues

In addition to the fees charged to the UCITS and listed above, the following costs may be added:

- the contributions due for the management of the UCITS pursuant to 4° of section II of Article L. 621-5-3 of the Monetary and Financial Code;
- exceptional and non-recurring taxes, fees, royalties and governmental fees (in relation to the UCITS);
- exceptional and non-recurring costs for debt collection (e.g. Lehman) or a procedure to enforce a right (e.g. class action proceedings).

Swing pricing

Swing Pricing Mechanism

The management company has established a method for adjusting the net asset value of the Fund with a trigger threshold, known as Swing Pricing, to protect the interest of unitholders.

Under this mechanism, investors bear the portfolio adjustment costs — including transaction fees, bid/offer spreads, and taxes or fees applicable to the UCITS — related to investments or disinvestments when there are significant numbers of subscriptions and redemptions.

When the net balance of investors' net subscription and redemption orders exceeds a predefined threshold, called the trigger threshold, the net asset value is adjusted.

The NAV is adjusted up or down if the balance of subscriptions- redemptions is respectively positive or negative, so as to take into account the readjustment costs attributable to the net subscription and/or redemption orders.

The trigger threshold is expressed as a percentage of the net assets of the Fund.

The parameters for the trigger threshold and the NAV adjustment factor are determined by the management company and periodically reviewed.

The adjusted net asset value, known as the « swinging » value, is the only net asset value of the Fund and therefore the only one published and communicated to unitholders.

Due to the application of Swing Pricing with a trigger threshold, the volatility of the UCITS may not be solely derived from that of the financial instruments held in the portfolio.

In accordance with regulatory provisions, the management company does not disclose the levels of the trigger threshold and ensures that internal information circuits are restricted in order to preserve the confidentiality of the information.

HSBC SELECT FLEXIBLE FCP

Appropriation of distributable amounts

Definition of distributable amounts

Distributable amounts consist of the following:

Income:

Retained earnings is increased by net income, and the balance of accrued income is added or subtracted as appropriate.

Capital gains and losses:

Capital gains realised, net of costs, minus realised losses, net of costs, recognised during the fiscal year, plus net gains of the same type recognised in previous fiscal years that were not distributed or accumulated, plus or minus the balance of accrued gains.

The sums referred to as « income » and « capital gains and losses » may be distributed, in whole or in part, independently of each other.

The payment of distributable sums shall be made within a maximum period of five months following the end of the fiscal year.

Where the UCI is authorised under Regulation (EU) 2017/1131 of the European Parliament and of the Council of 14 June 2017 on money market funds, by way of derogation from the provisions of paragraph I, the distributable sums may also include unrealised capital gains.

Appropriation of distributable amounts:

NOTES TO THE ANNUAL FINANCIAL STATEMENTS

1. Accounting policies

The annual financial statements are presented in the form prescribed by ANC regulation 2014-01, as amended.

The following general accounting principles are applied:

- true and fair view, comparability, going concern;
- accuracy, reliability;
- prudence;
- consistency of accounting methods from one period to the next.

The interest received basis is used to recognise revenue from fixed-income securities.

Securities bought and sold are recognised excluding costs.

The euro is the reference currency for the portfolio's accounting.

The duration of the reporting period is 12 months.

Asset valuation rules

Financial instruments are recognised according to the historical cost method and are entered in the balance sheet at their present value, which is determined by the last-known market value or, if no market exists, by any external means or through the use of financial models.

Differences between the present values used when calculating the net asset value and the historical costs of the securities upon their entry into the portfolio are recorded in « valuation differentials » accounts.

Securities that are not in the portfolio's currency are recognised in accordance with the principle set forth below then converted into the portfolio's currency according to the exchange rates in effect on the day of the valuation.

Deposits:

Deposits with a remaining maturity of 3 months or less are valued according to the straight-line method.

Equities, bonds, and other securities traded on a regulated or equivalent market:

For the calculation of the net asset value, equities and other securities treated on a regulated or equivalent market are valued based on the last exchange price of the day.

Bonds and equivalent securities are valued at the closing price supplied by various financial services providers. Interest accrued on bonds and equivalent securities is calculated up to the net asset value date.

Equities, bonds, and other securities not traded on a regulated or equivalent market:

Securities not traded on a regulated market are valued under the responsibility of the management company using methods based on the asset value and the yield, taking into consideration the prices used in recent significant transactions.

Negotiable debt instruments:

Negotiable debt instruments and equivalent securities for which transaction amounts are not significant are valued on an actuarial basis according to a reference rate defined below, plus any differential representative of the issuer's intrinsic characteristics:

- Negotiable debt instruments with a maturity of 1 year or less: Interbank rate offered in euros (Euribor);
- Negotiable debt instruments with a maturity of more than 1 year: Yield on normalised annual interest Treasury bonds (BTAN) or fungible Treasury bonds (OAT) with similar maturity for the longest durations.

Negotiable debt instruments with a residual maturity of 3 months or less may be valued according to the straight-line method.

Treasury bonds are valued at the market rate communicated daily by Banque de France or treasury bond specialists.

UCIs held:

UCI units or shares are valued at the last known net asset value.

Temporary securities transactions:

Securities borrowed under repurchase agreements are recorded in assets under « receivables under repurchase agreements » for the amount specified in the contract plus accrued interest receivable.

Securities delivered under repurchase agreements are recorded in the long portfolio for their present value. The payable under repurchase agreements is recorded in the short portfolio at the value set in the contract plus accrued interest payable.

Lent securities are measured at their present value and are recorded under assets in « receivables representing lent securities » at the present value plus accrued interest receivable.

Borrowed securities are recorded in assets under « borrowed securities » for the amount specified in the contract and in liabilities under « payables representing borrowed securities » for the amount specified in the contract plus accrued interest payable.

Financial futures:

Financial futures traded on a regulated or equivalent market:

Financial futures traded on regulated markets are valued at the day's settlement price.

Financial futures not traded on a regulated or equivalent market:

Swaps:

Interest rate and/or currency swaps are valued at their market value based on the price calculated by discounting future interest flows at the market interest and/or exchange rates. This price is adjusted to take into account the issuer's creditworthiness risk.

Index swaps are valued on an actuarial basis according to a reference rate provided by the counterparty.

Other swaps are valued at their market value or at a value estimated according to the methods established by the management company.

Off-balance-sheet commitments:

Futures appear in off-balance-sheet commitments for their market value at the price used in the portfolio.

Options are converted into the underlying equivalent.

Commitments on swaps are shown at their nominal value or, in the absence of a nominal value, for an equivalent amount.

Management fees

The management and operating costs cover all of the fees related to the UCI: financial, administrative, accounting, custody, distribution, audit costs.

These fees are charged to the income statement of the UCI.

Management fees do not include transaction fees. For more information on the costs actually billed to the UCI, please see the prospectus.

They are recognised on a pro rata basis each time the net asset value is calculated.

The aggregate of these fees complies with the maximum fee rate as a percentage of the net assets given in the prospectus or the rules of the fund:

FR0013313996 - HSBC SELECT FLEXIBLE B unit: Maximum fee of 0.60% incl. VAT for internal fees and 0.30% incl. VAT for operating and other service fees.

FR0013269875 - HSBC SELECT FLEXIBLE R unit: Maximum fee of 0.30% incl. VAT for internal fees and 0.30% incl. VAT for operating and other service fees.

FR0011883347 - HSBC SELECT FLEXIBLE H unit: Maximum rate of 0.60% incl. taxes for internal fees and 0.30% incl. taxes for operating and other service fees.

FR0007036926 - HSBC SELECT FLEXIBLE A unit: Maximum fee of 1.20% incl. VAT for internal fees and 0.30% incl. VAT for operating and other service fees.

Swing pricing

Swing Pricing Mechanism

The management company has established a method for adjusting the net asset value of the Fund with a trigger threshold, known as Swing Pricing, to protect the interest of unitholders.

Under this mechanism, investors bear the portfolio adjustment costs — including transaction fees, bid/offer spreads, and taxes or fees applicable to the UCITS — related to investments or disinvestments when there are significant numbers of subscriptions and redemptions.

When the net balance of investors' net subscription and redemption orders exceeds a predefined threshold, called the trigger threshold, the net asset value is adjusted.

The NAV is adjusted up or down if the balance of subscriptions- redemptions is respectively positive or negative, so as to take into account the readjustment costs attributable to the net subscription and/or redemption orders.

The trigger threshold is expressed as a percentage of the net assets of the Fund.

The parameters for the trigger threshold and the NAV adjustment factor are determined by the management company and periodically reviewed.

The adjusted net asset value, known as the « swinging » value, is the only net asset value of the Fund and therefore the only one published and communicated to unitholders.

Due to the application of Swing Pricing with a trigger threshold, the volatility of the UCITS may not be solely derived from that of the financial instruments held in the portfolio.

In accordance with regulatory provisions, the management company does not disclose the levels of the trigger threshold and ensures that internal information circuits are restricted in order to preserve the confidentiality of the information.

Appropriation of distributable amounts

Definition of distributable amounts

Distributable amounts consist of the following:

Net income:

Retained earnings are added to net income, and the balance of accrued income is added or subtracted as appropriate. Net income for the fiscal year is equal to the amount of interest, arrears, dividends, premiums and bonuses, remuneration and any income related to the securities comprising the UCI's portfolio, plus the income from any amounts temporarily available, less management fees and borrowing costs.

Capital gains and losses:

Capital gains realised, net of costs, minus realised losses, net of costs, recognised during the fiscal year, plus net gains of the same type recognised in previous fiscal years that were not distributed or accumulated, plus or minus the balance of accrued gains.

Appropriation methods for distributable amounts:

<i>Unit(s)</i>	<i>Appropriation of net income</i>	<i>Appropriation of realised net capital gains or losses</i>
