

HSBC Global Investment Funds

EURO BOND TOTAL RETURN

Marketing communication | Monthly report 31 August 2025 | Share class AC

Investment objective

The Fund aims to provide a long-term capital growth and income by investing in a portfolio allocated across the full spectrum of Euro denominated bonds and other similar securities.

Investment strategy

The Fund is actively managed and is not constrained by a benchmark.

The Fund employs a Total Return strategy that aims to capture the majority of the upside in the Euro credit universe while limiting the downside risk and has a flexible allocation across the bond market, over an investment cycle, to achieve risk-adjusted returns above those of the investment universe.

The Fund will mostly invest in investment grade and non-investment grade bonds denominated in Euro, issued by governments, government-related, supranational entities and companies that are based in developed markets.

Companies and/or issuers considered for inclusion within the Fund's portfolio will be subject to excluded activities in accordance with HSBC Asset Management's Responsible Investment Policies.

The Fund may invest up to: 49% in cash and money market instruments; 10% in other funds; 10% in bonds issued by governments, government-related, supranational entities and companies based in emerging markets.

The Fund may invest up to: 10% in convertible bonds; 15% in contingent convertible securities; 10% in asset-backed securities and mortgage-backed securities.

The Fund's primary currency exposure is to Euro.

See the Prospectus for a full description of the investment objectives and derivative usage.

Main risks

- The Fund's unit value can go up as well as down, and any capital invested in the Fund may be at risk.
- The Fund invests in bonds whose value generally falls when interest rates rise. This risk is typically greater the longer the maturity of a bond investment and the higher its credit quality. The issuers of certain bonds, could become unwilling or unable to make payments on their bonds and default. Bonds that are in default may become hard to sell or worthless.
- Derivatives may be used by the Fund, and these can behave unexpectedly. The pricing and volatility of many derivatives may diverge from strictly reflecting the pricing or volatility of their underlying reference(s), instrument or asset.

Risk Disclosure

- Investment Leverage occurs when the economic exposure is greater than the amount invested, such as when derivatives are used. A Fund that employs leverage may experience greater gains and/or losses due to the amplification effect from a movement in the price of the reference source.
- Further information on the potential risks can be found in the Key Information Document (KID) and/or the Prospectus or Offering Memorandum.
